👤 SUMMARY

Computer Science student focused on building AI-powered applications and intelligent systems. Experienced in RAG-based architectures, machine learning, and backend development (FastAPI, Django). Passionate about solving real-world problems through scalable and efficient solutions, with a growing interest in Green AI and AI Security.

🎓 EDUCATION

2023 – Present Bangalore, India	B.Tech – Computer Science and Engineering CMR University
------------------------------------	--

🧠 SKILLS

- Python, HTML, SQL, Django, FastAPI, Scikit-learn, LangChain, RAG, Git, GCP, Pandas, NumPy

🏆 AWARDS

Winner – Project Expo (Flight Delay Detection)

Top 20 – Skills4Future AI Capstone

Completed Advanced Course on Green AI (AICTE, Shell)

Participant – VYUHATECH 2.0 Hackathon (2025)

📁 PROJECTS

WattWise

AI-Powered Electricity Analyzer

- Built ML system to analyze electricity consumption without smart meters
- Used 3 models for appliance-level estimation
- Top 20 among ~100 projects (capstone)
- Optimized for low compute (<60s training)

Kisan360

RAG-based AI System

- Built RAG system for agricultural query answering

- Created document ingestion + vector retrieval pipeline
- Focused on real-world usability

Digital Rakshak

AI Safety Assistant

- RAG-based assistant for cyber awareness
- Designed for non-technical users
- Focused on safe AI responses

InternIQ

Internship Dashboard

- Streamlit dashboard for internship aggregation
- FastAPI backend + scraping pipeline
- Planned deployment on GCP

Flight Delay Detection (Expo Winner)

- Built ML model for delay prediction
- Feature engineering + preprocessing
- Won project expo

INTERESTS

- AI & Machine Learning
- RAG Systems
- Backend Development
- Green AI
- AI Security
